Magvast concrete system junction boxes

MV40 Magvast junction box Ø 19 mm

Equipped with conical tube inlet with tube snapper.
Including 2 M3 x 12 mm screws.

Sealable No
With screening No
Provided with revolving ring No
Connectable No
For number of electric fittings 1
Mounting switching equipment Screwing
With screws Yes
Housing feed-through by break-out opening No
Housing feed-through by seal membrane No
Housing feed-through by nozzle No
Housing feed-through by step membrane No
Pipe locking optional No

Number of poles of the clamp	
Clamp position fixed	No
Luminaire hook mounting	No
Nozzle	Tunnel branch pipe
With nail lugs	No
Special application	-
Dispatch	100

Attema's Magvast® concrete construction system is used mainly in concrete factories, but also on building sites. Magvast® works with magnets that are clamped into the boxes to prevent concrete water from entering the boxes.

After measuring, the magnets are placed on which the box is then placed. After the formwork is removed, the magnet remains behind on the steel table or formwork, after which it can be removed and reused. Magvast® is then ready for the next cycle. It is a flexible system that does not damage the formwork.

Attema has magnets for various types of boxes in its range. Magnets have a high clamping force (>100 kg).

Suitable for steel formwork.

Attached without drilling, so no damage to the formwork.
